<sup>1)</sup> The calculation of the risk indicator is based on the CESR/10-673 Guidelines. The risk indicator is based on historic and partly simulated data; it cannot be used to predict future developments. The classification of the Fund may change in future and does not represent a guarantee. A classification into category 1 is no risk-free investment either, 7 is the highest risk.

<sup>2)</sup> Historical performance indications and financial market scenarios are not reliable indicators of current or future performance. The performance data does not take into account the commissions and costs incurred on the issue and redemption of fund units.

<sup>3)</sup> For more details, please refer to the relevant chapter "Net Asset Value" of the Fund's prospectus.

## Potential risks

---

### Equity Risk

Equities are subject to market-, sector-, and company-specific risk which may result in price increases/decreases.

### Market Risk

The price and value of investments and any income that might accrue could fall or rise or fluctuate. You may also lose the total sum that you have invested. If any of the markets on which any of the underlying investments in the Fund is listed were to perform negatively, an underlying investment which has a high correlation to its market will generally move in tandem, irrespective of its fundamental strength. This in turn will affect the performance of the Fund. Market risk is inherent in all funds which are populated with quoted investments.

### Liquidity Risk

This is the risk of not being able to sell your investment at short notice. Regulated mutual funds usually trade on a daily basis, thereby offering good liquidity. Should there be a high number of redemption requests at any time owing to a desire by large numbers of investors to liquidate their holdings, the Fund may suspend liquidations or offer reduced liquidity in order to reduce the impact of having to sell significant amounts of the underlying investments in order to meet the requests.

### Cash Risk

Where a fund holds at any one time a substantial proportion of its assets in cash, near-cash, or money-market instruments, it might not participate fully in a rise in market values of the asset classes the Fund would otherwise invest in.

### Underlying Investment Risk

This is the risk of any of the underlying investments in a Fund underperforming for any reason. By definition, such risk attaches to each of the underlying investments in all diversified funds. Underperformance by one or more of the underlying investments will negatively affect the overall performance of the Fund, although the relative impact of each individual underperformance will be determined by the extent of the Fund's diversification.

### Currency Risk

If a trade is settled or a position is closed out in a currency other than the investor's base currency, the value of the return may be affected by the conversion into the base currency due to adverse movements in exchange rates.
